	Doubly Linked List land warmen
he	In a doubly linked list, each node Contains a data fact along with the two addresses, one for the previous node and the other one for the
	meat male
	prev data next prev data next prev data next 7 - 21 - 8 - NULL
hymri	Implementation A doubly linked list can be implemented in C language Os follows:
	int data:
1 = 8 3 1	Struct Node * next; Struct Node * prev;
	Oberation on a Double link List
	Oberations on a Doubly Linked List The insertion and deletion on a Doubly Linked list Can be performed by rewring pointer Connections Just like we saw in a singly linked list.
	The difference here lies in the fact that we need to soliust two pointers (prev & next) instead of one [next) in the case of a Doubly linked list.
	in the case of a Doubly linked list.
